

Pentafluoroallyl fluorosulfate (abb. FAFS)

$\text{CF}_2=\text{CFCF}_2\text{OSO}_2\text{F}$

Purity	97%
CAS Number	67641-28-5
Molecular Formula	C3F6O3S
Molecular Weight	230.09
Application	<p>FAFS shows an activated nucleophilic reaction and is widely used for synthesizing pentafluoroallyl compounds with functional perfluoroether groups, halogen groups, and azide groups. In addition, this pentafluoroallyl group is converted to a pentafluoropropyl epoxide group by an oxidation reaction, enabling copolymerization with HFPO.</p> <p>1.
